Dear EPA,

The Willamette River Portland Harbor cleanup plan cannot take any shortcuts to reduce the expense, since a less effective plan will only have a long term adverse impact to our community's future. The plan should include removal of at least 1,000 acres of polluted sediment and the toxic dredged sediments must be taken to an appropriate landfill, not left in the river. One of the measurements of success must be the removal of the Fish Consumption Advisory so that eating fish from the Lower Willamette will be as safe as eating fish from anywhere else in the Willamette River system.

It's essential that those liable for the pollution are held accountable and pay for a comprehensive cleanup that will restore and protect the health of the Willamette River Portland Harbor citizens and wildlife.

Sincerely,

(b) (6)
